3. Note from Freshwater Legacy Initiative

Wed, Jul 31, 2019

Dear partner,

Please find attached a cover letter and summary of findings from the mid-term evaluation of the BC Freshwater Legacy Initiative, which was conducted by independent evaluators Knowledge to Action.

We are extremely grateful to you for sharing your time and valuable feedback. In the cover letter, I have outlined our priorities for the Legacy Initiative over the coming year. These priorities were directly informed by the input that you shared and the findings of the evaluation.

If you have any questions or additional feedback, please do not hesitate to get in contact with myself, Jennifer or Alex.

Thank you for the amazing work you are doing for BC's watersheds!

Tim

Project Director  
BC Freshwater Legacy Initiative

4. Update from Somenos Marsh Society  
Through the Clean Water Action Project (CWAP), we are conducting property visits to landowners with properties bordering lakes, tributaries, creeks or marshlands in the S'amuna'/Somenos and Kw'amutsun/

Quamichan area, offering our professional services and knowledge. The goal of these visits is to assess riparian health and the presence and impacts of invasive species, flooding, and erosion, and to provide guidance and recommendations for restoration work. If you wish to schedule a site visit with us, we will provide recommendations specific to your property and assess if your riparian area is a potential site for a restoration project. Should your property be selected, we have the funding to offer, with your permission, riparian restoration activities in the fall and early spring of 2019/2020. These could involve projects such as native planting, invasive removal, and live-staking.

Don't hesitate to contact us at [programs@somenosmarsh.com](mailto:programs@somenosmarsh.com) or call our Program Manager at 778-401-8460 ext 2.

## 5. Update on Sunscreen impact analysis

From: Ken Traynor

Date: Mon, Sep 2, 2019 at 2:52 PM

Subject: Fwd: L2323561 COA [Job #]

Dear All - Attached are the results from the sampling for Oxybenzone in the Upper Cowichan River from August. Trace amounts were found in all four samples ranging from 68 ng/L to 570 ng/L. I have also attached my sampling summary with estimated number of tubers on the water that weekend. I hope that Deb may be able to provide some context for these results. The concentrations are in the range of those reported from other jurisdictions in the earlier literature review provided by Melissa Evans.

Ken

## 6. Question from MLA Constituency staff RE tubing:

Aug 28 2019

Hi Jill!

My name is Kayla and I am a Constituency Assistant for MLA Sonia Furstenau.

I just wanted to reach out to see if you might be able to share the Cowichan Watershed Board's opinion on tubing in the Cowichan River. We've recently

received a few emails from constituents who are concerned about the impact that that activity has on the health of the waterway. **We're looking to you guys for advice.**

Please let me know what your thoughts are on this. I look forward to hearing from you!

All the best,

Kayla Brent  
Constituency Assistant | Sonia Furstenau MLA  
164 Station St, Duncan, BC V9L 1M7

---

Reply to Kayla (cc Tom) from Jill  
Aug 28, 2019

Hello Kayla! I have heard lovely things about you! Hope to meet you one of these days.

Thanks for asking - the short answer is that the Board hasn't taken a position but we are looking into the additional stresses on aquatic life with longer hotter summers and low water levels. The Board also wrote to the FLNRORD Minister this year to request a closure to sports fishing when river water levels are low and temperatures high (and I think that was granted, right Tom?)

Tom - more details here? (Tom Rutherford is our ED and a fish biologist).
